BI Management & reporting tools

For management

Visualize and automatically analyze clinical, social and administrative data.

Nationwide, area wide or organization wide **population health management**.

To optimize processes further, enable **AI/ML tools** for automated segmentation and predictions of different patient groups.

For professionals

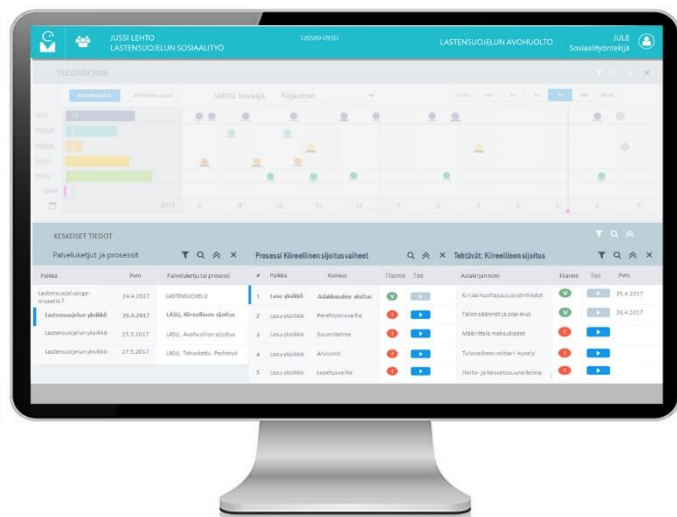

Identify high-need, high-cost patients automatically and provide them with a structured health plan.

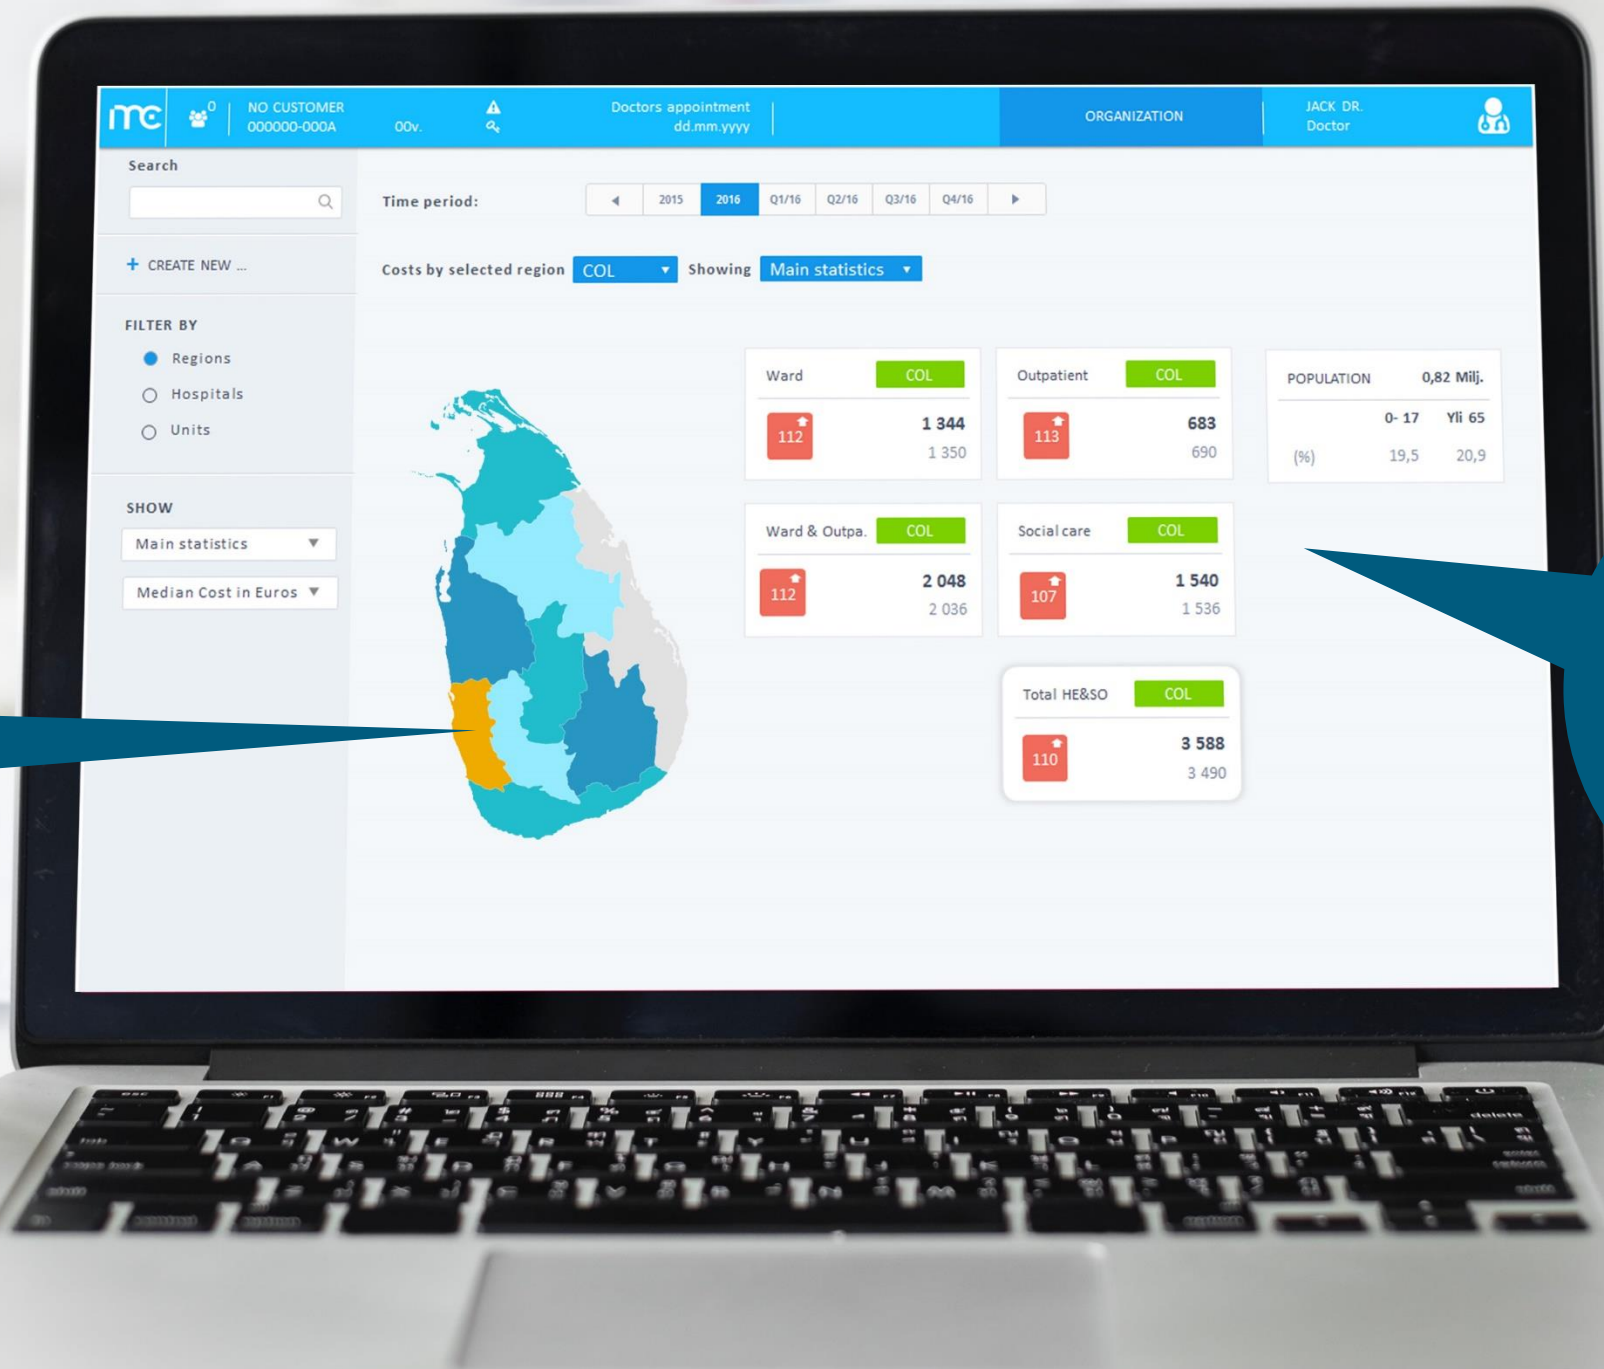

Prevent unnecessary treatment with better care coordination and integration of care.

Improve cost-effectiveness by targeting preventive care to certain patient groups.
